1   The Basics

1.1   Overview

Thank you for choosing the Smart wearable devices. After reading this guide you will be able to fully master the use of your watch and appreciate all its functions and ease of use.

Not only does the smartwatch provide you with basic call functions such as call Register, but also with many practical functions and services, to improve the time you spend working and playing.

The availability of some services and features described in this manual depends on the network and your subscription. Therefore, some menu items may not be available in your smartwatch. The shortcuts to menus and features may also vary from watch to watch.

Our company reserves the right to revise this manual content without prior notice.

1.2   Safety warnings and notices

Before using your mobile phone and smartwatch, read and understand the following notices carefully to

ensure you will use it safely and properly.

1.3 General attention

- Only the battery specified by our company should be used in your smartwatch. Other products might result in battery leakage, overheating, fire or explosion.
- To avoid your smartwatch malfunctioning, or catching fire, please do not violently impact, jolt or throw your smartwatch.
- Please do not place the smartwatch in a microwave oven or high-pressure equipment. Otherwise it could lead to unexpected accidents such as damage to the circuitry or fire hazard.
- Please do not use your smartwatch near flammable or explosive gases, otherwise it could cause malfunction of your phone or fire hazard.
- Please do not subject your smartwatch to high temperatures, high humidity or dusty places; otherwise this may lead to the malfunction of your smartwatch.
- To avoid your smartwatch falling and malfunctioning or being damaged, please do not place it on uneven or unstable surfaces.

1.4　Notices when using your smartwatch

■ Please do not subject the LCD to impact or use the screen to strike things, as this will damage the LCD board and cause leakage of the liquid crystal. There is a risk of blindness if the liquid crystal substance gets into the eyes. If this occurs rinse eyes immediately with clear water (under no circumstances rub your eyes) and go immediately to a hospital for treatment.

■ Do not disassemble or modify your smartwatch, as it will lead to damage to the smartwatch such as battery leakage or circuitry failure.

■ Please do not use needles, pen tips, or other sharp objects on the keypad as this may damage the smartwatch or cause it to malfunction.

■ The battery has a limited service life. The remaining life gets shorter as the times of charging increase. If the battery becomes feeble even after the charging, this indicates the service life is over and you have to use a new battery.

■ When installing the battery, do not use force or pressure, as this will cause the battery to leak, overheat, crack and catch fire.

■ If the battery overheats, changes color, or

becomes distorted during use, charging, or storage, please stop using and replace it with a new battery.

■ Please do not continuously charge for more than 24 hours.

1.5 Charging your smartwatch

■ Connect the connector of USB to the smartwatch. The battery level indicator flashes on the screen. Even if the smartwatch has been turned off, the charging image still appears, indicating that the battery is being charged. If the smartwatch is overused when the current is insufficient, it may take longer time for the charging indicator to appear on the screen after the charging begins.

■ When the battery level indicator does not flash and indicates the battery is full, this indicates the charging has been completed. If the smartwatch is off during charging, the charging being completed image also appears on the screen. The charging process often takes 3 to 4 hours. During the charging, the battery, smartwatch and USB gets warm, this is a normal phenomenon.

■ Upon the completion of charging, disconnect the

USB, and from the smartwatch.

Notes:

- During charging, the smartwatch must be placed in well-ventilated environment of ＋5℃ ~ ＋40℃. Always use the USB supplied by your smartwatch manufacturer. Using an unauthorized USB might cause danger and invalidate the authorization and warranty clauses for your smartwatch.
- Make sure the battery has been installed before charging. It is best not to remove the battery while charging.
- Upon completion of charging, disconnect the USB from your smartwatch and the power supply.

If you have not disconnected the USB from your **smartwatch** *and the power supply, the charger will continue to charge the battery after about 5 to 8 hours when the batter level decreases substantially. We advise you not to do like this, as it lowers your phone performance and shortens your* **smartwatch** *life(Not Applicable)*

2 Getting Started

2.1 Equipment parts diagram

USB port

Power key

Belt buckle

Touch panel

Camera
Items supplied and available accessories with the device may vary by region or service provider.

• Accompanying articles designed specifically for the device, which may not be compatible with other devices.

• Design and specifications are subject to change without notice.

If you have any questions about the smartwatch, please find the solutions from the table below.

FAQs	Causes	Solutions
Failed to turn on your smartwatch	The battery power is used up	Check the battery power level or charge the battery.
Another device can't find your device or disconnect	Bluetooth is not on	Turn on the Bluetooth
	Long distance	Put the devices closer to each other
	Function does not start	Reboot and try again
Failed to make a call	The mobile device is not connected	Connect to the mobile device
	No access to the network or connection limits	Ensure that your mobile device is connected to the network normally or to lift connection limits

	Disconnect	Try to find others with the Find my devices app. If it's not successful ,please reboot and try again.
Failed to charge the battery	The battery or the USB is damaged.	Change a new battery or USB.
	Charge the battery when ambient temperature is lower than -10℃ or above 55℃.	Change the charging environment.
	Poor connection.	Check whether the plug is properly connected.

6. Warnings

Caution: The user is cautioned that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to

radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures: -- Reorient or relocate the receiving antenna. -- Increase the separation between the equipment and receiver. -- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected. -- Consult the dealer or an experienced radio/TV technician for help.

FCC Radiation Exposure Statement: This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment.
